Experience

- **Benefi Global** — Remote
  Senior Software Engineer, Frontend — *Aug 2025 – Present*
  - **Multi-Rail Donation Checkout**: Architected the giving flow as a config-driven, 30+ stage checkout (lazy stage registry, prefetch, deep links) unifying four payment rails: **Stripe**/**Apple Pay** cards, multi-chain crypto (**EVM** and **Solana**, exchange transfers and self-custody wallets), brokerage securities with Letter-of-Authorization handling, and donor-advised funds, with guest checkout and recurring giving. Adding a rail became a config change rather than a refactor, cutting integration time from three weeks to under one and lifting completion 18%.
  - **Search, Discovery & Web Performance**: Built the Discover feed (CMS-driven, cached), global search, and the charity, fundraiser, category and state pages with Impact Metrics and "More Like This" picks. Route-level **code-splitting**, **list virtualization** and lazy-loading Stripe.js on first mount cut the initial bundle 40% and lifted **LCP** (p75) from 3.4s to 1.3s. Also fixed the SSR hydration mismatches and scroll-restoration defects on Discover.
  - **Design System & Donor Hub**: Built the atomic-design component library and typed API layer (JWT and guest auth) the app sits on, then shipped the logged-in suite on it: payment methods, Benefi Wallet, donation history, recurring donations, donor profile, my charities, notifications, and a documents center for receipts, 1099s and tax forms. Added middleware route gating and remote-config feature flags, and led a strict **JavaScript-to-TypeScript** migration across the codebase. New pages landed about 35% faster.
  - **Charity Portal**: Designed and built a **Next.js**/React portal for nonprofits, from empty repo to production in under six months: multi-stage **Plaid** KYC and identity verification, organization search, claim and switching, draft/publish profiles with changed-field diffing, team roles and invites, and **Stripe Connect** banking for balances, withdrawals and payouts. Hardened with RSA-OAEP encryption, CSP headers and a token refresh that collapses concurrent 401s into one call. Shipped at **Lighthouse** 90+ behind a 95% CI coverage gate.
  - **Quality & Technical Leadership**: Introduced **Vitest**/RTL to a codebase with no tests and set the frontend review standard: pre-commit lint, typecheck and related-test gates, MSW integration tests, and Lighthouse CI budgets. Onboarded three engineers onto the payments code, taking coverage past 85% and cutting post-merge regressions 40%. Shipped daily with **Claude Code** and **Cursor** in the loop for refactors, tests and review.

  Tech Stack: React 19, Next.js 16, TypeScript, Zustand, TanStack Query, Tailwind CSS, Material-UI, Sass, Stripe, Stripe Connect, Plaid, wagmi/viem, Zod, Vitest.

- **Tekion Corp** — Bangalore, India
  Software Engineer — *April 2025 – July 2025*
  - **Concierge-Pro Development**: Built key modules (guest-page, subscriptions) via a **config-driven builder pattern** (AEC Studio); platformized trade-in, header and footer modules for multi-brand support (Honda, Mercedes RRG, Inchcape, BMW), replacing four forked implementations with one configurable set.
  - **Multi-Brand Architecture**: Solutionized and implemented a scalable multi-brand checkout architecture from project inception, cutting new client onboarding time by nearly 60%.

- **Tekion Corp** — Bangalore, India
  Associate Software Engineer — *July 2023 – March 2025*
  - **GM-VDP and VSR**: Delivered vehicle-compare and vehicle-lead modules for a multi-brand e-commerce precheckout project (Cadillac, Chevrolet, Carbravo, Buick, GMC), using a token-system UI approach (**compound components**, Provider & Builder patterns) with cross-module state in **Redux**, cutting development time from 12 months to 3.
  - **Honda (CPO and ZDX) Checkout**: Built the Checkout Module from scratch (**token-system**, builder pattern) for two Honda checkout systems, delivering Trade-In, App-Navigation and a Congratulations Page with reusable, **mobile-first** components, cutting development time by 40%. Owned 20+ features end to end, from requirements gathering and architecture design through UX enhancement, backend contract negotiation and testing.

- **Tekion Corp** — Bangalore, India
  Software Engineer Intern — *Jan 2023 – June 2023*
  - **UI Component Development & Testing**: Built reusable components (Drawer, Modal, Popup) on an **event-emitter pattern**, cutting development time 25%; wrote **Jest** tests to 90% coverage.

Education

- **Indian Institute of Information Technology** — Lucknow, India
  Bachelor of Technology in Information Technology; CGPA: 8.5/10.0 — *Aug. 2019 – July 2023*

Skills

- **Frontend**: TypeScript, JavaScript, React 19, Next.js (App Router), Redux, Zustand, Tailwind CSS, HTML/CSS, SCSS
- **Performance & UX**: Core Web Vitals, SSR/RSC, component architecture, WCAG/accessibility, design systems
- **APIs & Integrations**: REST, GraphQL, Node.js, TanStack Query, Stripe Connect, Plaid, wagmi/viem, Solana
- **Tooling & AI**: Vitest, Jest, RTL, ESLint, Git, Docker, GitHub Actions (CI/CD), Agile, Claude Code, Cursor, MCP
